

Phineas Fritsch

Los Angeles, CA · (510) 882-4915 · contact@phineasfritsch.com · [linkedin.com/in/phineasfritsch](https://www.linkedin.com/in/phineasfritsch) · github.com/phineasfritsch

Financial actuarial mathematics senior applying to product and actuarial roles. The software below is AI-assisted: I run several agents the way a company runs departments and do the product manager's job on top, deciding what gets built and operating the result.

EDUCATION

University of California, Los Angeles Expected June 2027

DEGREE	B.S. Financial Actuarial Mathematics · Minor in Accounting
ACTUARIAL	No exams passed. Sitting Exam FM, Fall 2026; MATH 174E, Mathematics of Finance, is the FM syllabus and is already behind me. Actuarial Models (178A, 179) in progress.
CASE COMP	13th Annual Actuarial Case Competition (BAS), Winter 2025. Priced three commercial property insurance structures for a simulated Fortune 500 client against tail risk, fitting Lognormal, Gamma and Pareto to historical losses and running 10,000-iteration Monte Carlo simulations to compare TCOR and Risk-Adjusted TCOR.
ALSO	Probability (170E/170S), Real Analysis, Linear Algebra; MGMT 1A/1B, 105, 109; ECON 1/11

EXPERIENCE

UCLA Library, Biomedical Library — Student Assistant II Mar 2026 – Present

- Nobody assigned any of this. I built four tools for the unit, plus an iOS app routing shelf-reading, shelving and ILL pulls, because I wanted to be lazy about the parts that repeat daily.
- Reading the Collab Hub briefing meant signing into an admin portal and asking a supervisor on Slack for a two-factor code, every time. I put it where the unit can just read it, and that is the version my colleagues use now.
- After the library retired LibMaps, photographed and transcribed the shelf-end range labels across nine stack levels myself (1,123 photographs), validated them into one dataset, and built a call-number-to-shelf lookup and pull-list route planner on it (shelfmark.phineasfritsch.com).
- Circulation, interlibrary-loan pull lists, shelf reading, headcounts, opening and closing. Promoted from Student Assistant I.

MKTaxSolutions — IT Intern Aug – Sep 2024

- Consolidated 400+ client profiles across three separate services; integrated CCH software with office scanning systems; general IT support and client calls.

PROJECTS

Dibs — dibs.ge Rails 8 · PostgreSQL · Kamal · live

- Ranks UCLA general-education courses on grade history I obtained by filing four California Public Records Act requests: 176,290 rows, expanded to 1,544,628 individual grades after correcting an instructor fan-out that would have added 81,559 phantom ones.
- Rewrote the crawler from 657 + 480 requests an hour into a single ~700-request pass with a hard budget and a concurrency-1 lock: less load on UCLA's servers, and catalog staleness fell from 2,085 minutes to 3. Runs on a 2.5 GB server I budgeted by hand.

The Cut Card — thecutcard.com React Native · Expo · TypeScript · live

- Blackjack strategy and counting practice, built under one rule I set first: no claim about money anywhere in it, not in the app, not on the paywall, not in a notification.

LEADERSHIP

UCLA Sailing Team — Treasurer, then Team Captain 2024 – 2026

- Ran the executive board and weekly meetings; coordinated travel, housing and rosters for biweekly regattas on a constrained budget.

Theta Chi, Beta Alpha Chapter — House Manager, then Network Manager 2025 – Present

- Managed a \$10,000 annual operating budget and daily property operations with alumni. Directed summer renovations (plumbing, structural repairs, a new game room) and used them in recruitment, contributing to the second-largest pledge class in chapter history.

SKILLS

QUANTITATIVE	Monte Carlo simulation, loss distribution fitting, Excel modelling
ENGINEERING	Ruby on Rails, PostgreSQL, TypeScript, Swift, Python; Docker, Kamal, Cloudflare, GitHub Actions, Linux, Proxmox
LANGUAGES	English (native), German (B2/C1, accredited)
